

Text Editors & Office Software

Name: Mohit Raghavendra
Roll no.: CS25B1022

Difference between Text Editors and Word Processors:

Text editors:

- Work with plain text without rich formatting.
- Commonly used for coding, scripting, and configuration files.
- Lightweight and fast to load.
- Examples: Notepad, Sublime Text, VS Code.

Word processors:

- Support formatted text, images, tables, and other media.
- Used for creating reports, letters, and documents.
- Offer tools for spell check, templates, and page layout.
- Examples: Microsoft word, Google Docs, LibreOffice Writer.

Use of Education, Business, Programming with Text editors and Word Processors:

Education:

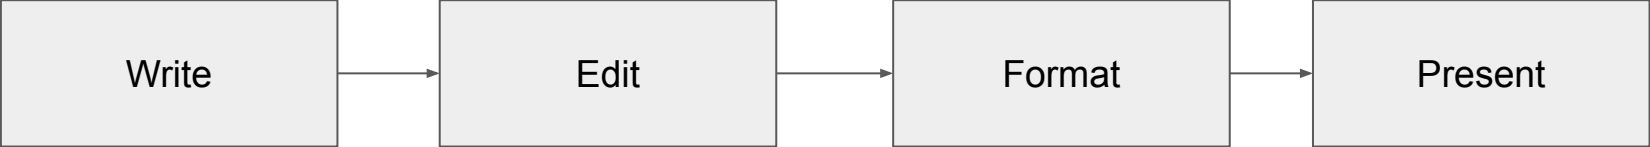

- Text editor- They are used in education for writing code, taking notes and creating simple text-based files for learning and assignments in the education field.
- Word processor- They are used in education for creating, editing, and formatting assignments, reports, and other academic documents.

Business:

- Text editors- They are used in business for writing scripts, editing configuration files, and creating quick notes or documentation.
- Word processor- They are used in business for creating professional documents, reports, letters, and presentations.

Programming:

- Text editors- They are used in programming for writing, editing, and debugging source code efficiently.
- Word processor- They are rarely used in programming, but they can help document code, write manuals, and prepare project reports.

THANK YOU
