Date: 08/09/2025

Text Editors:

Text editors are basic software tools used for writing and editing plain text. They are essential for programmers and developers to write source code in different languages. Popular examples include Notepad, Sublime Text, and Visual Studio Code. They usually include features such as syntax highlighting, auto-indentation, and line numbering.

Word Processing:

Word processing software is used to create, edit, and format text-based documents. These tools help users add tables, images, and styles to make professional documents. Examples include Microsoft Word, Google Docs, and LibreOffice Writer. They also offer features like spell check, templates, and collaboration options.

Table: Features and Examples

Feature	Example
Syntax Highlighting	Visual Studio Code
Spell Checking	Microsoft Word
Auto Save	Google Docs
